

## IPAD & IPHONE INTEREST GROUP Colin Hooker

We started the meeting in the usual way with an amusing video, this time seeing if the iPad can do away with paper completely. Then a look at the way personal information has been collected together with iOS 10.3 and the use of split screen in Safari.

Colin then spoke about lifewire.com, a website that contains a lot of helpful tutorials and other information on computers including many items on iPads - we looked at article on cookery which showed a kitchen balance and a cookery thermometer which were connected to an iPad with Bluetooth.

Sandra showed us her iPad Pro and then spoke about FilmOn TV which has been upgraded recently. She checked the programmes of BBC channels each week and noted the programmes she wanted to watch - the app now uses New Zealand time to make life easier!

Colin showed us some of the vast range of television channels available on the app, including a snooker channel, the NASA channel which sometimes broadcasts live from the space station and an iPad talk show.

After tea we discussed a range of other interesting topics including a mysterious darkening of the top of the screen in Safari (the iPad was operating in Private Browsing mode), how to put a link to a website on the home page, the range of topics available in Podcasts and listening to radio stations on the Apple TV. As usual, we all learnt something!
