

Mac Interest Group 28th Feb

We had eleven people at this month's meeting. It started off with a humorous video by James Veitch showing the adventure he had in responding to spam. This was followed by a question and answer session and some members problems were dealt with. Then we learned some tips and tricks to enable us to get the best from our Macs

There was a discussion and video on the merits of buying a refurbished device instead of new. The main feature of the program was cyber security including passwords, password managers, backing up and the setting up and using of Mac's inbuilt time machine. All in all the meeting seemed to go well.
